

In an effort to more effectively manage additional winter gate space at Dominion East Ohio's (DEO) TETCO/REX - Clarington and T Gas Pipeline (TGP) Gilmore interconnects, DEO will be allocating any additional gate space to the traditional transport suppliers (Full Requirements, General, and Daily pools) based on their November 2014 transportation pool's estimated peak day usage. The gate space volumes will be for the November 2014 through March 2015 period.

Suppliers operating non-Energy Choice/SSO transportation pools (i.e., Full Requirements, General, and Daily) will receive an email notification on October 15 informing them of the assigned gate space amount (dth/day) at both TETCO/REX-Clarington and TGP-Gilmore interconnects. Suppliers must respond to DEO by 5:00 p.m. EST on Friday, October 17 indicating whether they will accept the allocated volumes for the winter term. Any allocated volumes not accepted by suppliers will be made available to other suppliers on Monday, October 20, and will be re-assigned on a first-come, first-served basis.

DEO requests that suppliers who accept their assigned gate space plan to deliver those volumes at the assigned locations throughout winter. In the event DEO issues an Operational Flow Order (OFO), pursuant to Sections 8 and 13 of its General Terms and Conditions, Transportation Service and comparable sections of its Pooling Service Terms and Conditions, suppliers may be required to deliver an amount equivalent to the allocated gate space. Failure to do so may result in OFO non-compliance charges.
